

Abstract

The invention concerns a decorated article (7), in particular a mobile telephone housing or a mobile telephone window, and a multi-layer film, in particular an IMD-able stamping film. The decorated article (7) has a base body (71) and at least one decorative element (78) arranged on the surface of the base body. The decorative element has a transparent structure layer which has a spatial structure producing an optically perceptible effect, and a reflection layer (73) arranged between the surface of the base body and the structure layer.
